Close the Vulnerability Gap. Secure Your Endpoints.

HCL BigFix
SaaS Remediate

Remediate and secure your devices at scale with HCL BigFix SaaS Remediate.

The Vulnerability Fix Gap: Security's Silent Crisis

The Core Problem:
- Security teams are drowning in vulnerabilities.
- IT is buried in patching complexity.

The result? A widening gap between assessment and remediation that leaves you exposed.

Why this matters
The issue isn't visibility. **It's execution.** You can't protect what you don't fix.
Closing the gap requires automation and uniting IT and Security to eliminate risk.

The Data Proves the Problem: The Attack Surface is Exploding

42,000+
New CVEs discovered in 2025 alone.

+20%
Rise in CVEs actively exploited.

60%
Breached firms had unpatched fixes.

884
CVEs exploited in 2025.

The takeaway: The remediation gap is real, growing, and being actively exploited by attackers.

What's really holding you back?

Disjointed teams:
Security and IT operate in silos, causing communication breakdowns.

Too many tools:
Juggling 4-14 endpoint tools creates complexity, not security.

Speed vs. Security:
Business demands for speed often clash with security processes, creating friction.

Overstretched staff:
Limited budgets and a shortage of skilled pros leave teams overwhelmed.

There's a Smarter Way to Remediate

Instead of chasing alerts, leading organizations are closing the gap by:

✓ **Shrinking Patch Windows**
From weeks down to hours.

✓ **Slashing Remediation Time (MTTR)**
Across all endpoints, on-prem and cloud.

✓ **Automating Prioritization**
Using real-world threat intelligence to fix what matters most.

✓ **Uniting IT & Security**
With a shared platform and a single source of truth.

HCL BigFix SaaS Remediate: Don't Just Assess. Remediate.

Accelerate Remediation

- **Cloud-native:**
  No infrastructure required.

- **Onboard in Minutes:**
  Start fixing vulnerabilities on day one.

- **500,000+ Fixlets:**
  The industry's largest library of pre-built remediation content.

Collaborate Across Silos

- **Shared Dashboards:** Unify teams with a single view of risk and progress.

- **CyberFOCUS Analytics:** Prioritize with real-world exploit data from CISA & MITRE.

- **Protection Level Agreements (PLAs):** Track performance and build accountability.

Consolidate Tools & Effort

- **One Unified Platform:** Replace scripts, manual trackers, and multiple patching tools.

- **Built-in Intelligence:** Automate remediation, compliance, and reporting.

- **Manage Everything:** Endpoints on-prem, in the cloud, or hybrid—from one console.
